Windows Execution Artifacts: AmCache Analysis

Windows'un uygulamaların yürütülmesi ve uyumluluk durumunun takip edilmesi için oluşturulan bir veritabanıdır. Önceden yüklenen uygulamaların önbelleğe alınması, uygulama çalışma süresi, uygulama dosyalarının yerleri ve diğer bilgileri içerir. Bu bilgiler ise Windows'un uygulamaların hızlı başlatılmasını sağlamak ve uyumluluk sorunlarını tespit etmek için kullanılır.

Sistem üzerinde silinen programların kayıtları "Amcache.hve" dosyasında silinmemektedir. Bununla birlikte çalıştırılan ya da kullanılan uygulamalara dair kanıtlar sunulabilir.

"C:\Windows\AppCompat\Programs" dizininde bulunur. Amcache.hve dosyasının analizi, kötü amaçlı yazılımların tespiti, sistem aktivitelerinin analizi ve kullanıcı faaliyetlerinin belirlenmesi gibi amaçlarla kullanılabilir. Eric Zimmerman's araçlarından "AmcacheParser" kullanarak amcache.hve dosyası parse edildikten sonra analiz edilecektir.

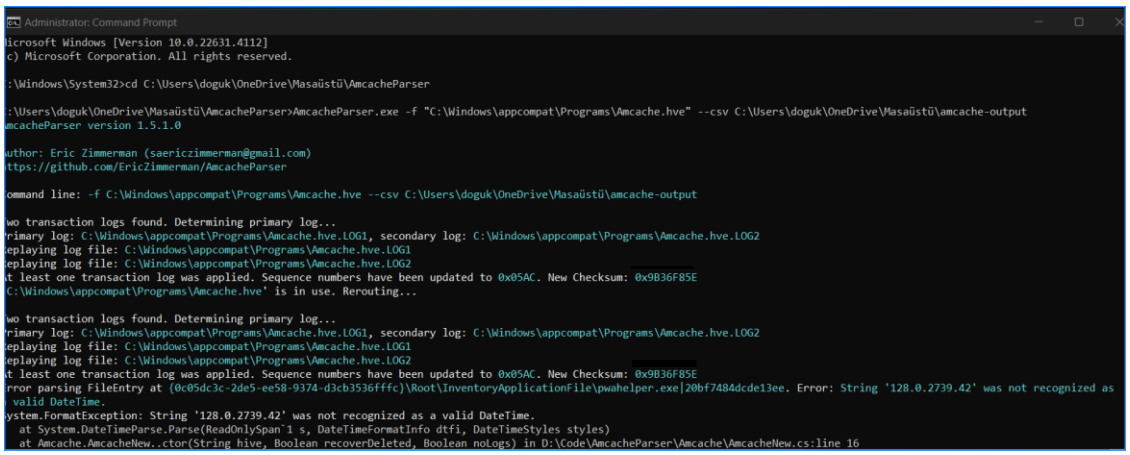

Figure 1 - Amcache Parser

Amcache çıktısının başarılı bir şekilde tamamlandığını ve amcache-output dosyasına kayıt edildiğinin çıktısı verilmiştir.

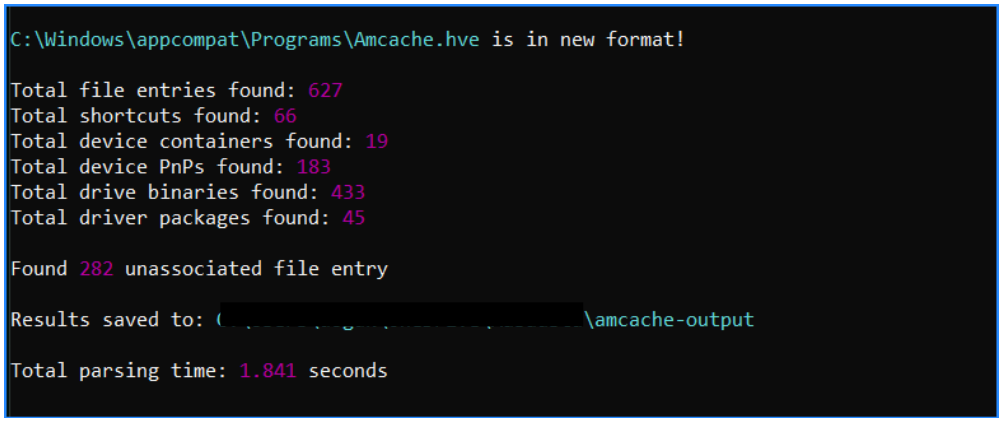

Figure 2 - Amcache Output

Output Files

Parse işlemi gerçekleştirildikten sonra 6 adet .csv dosyası oluşturulmuştur.

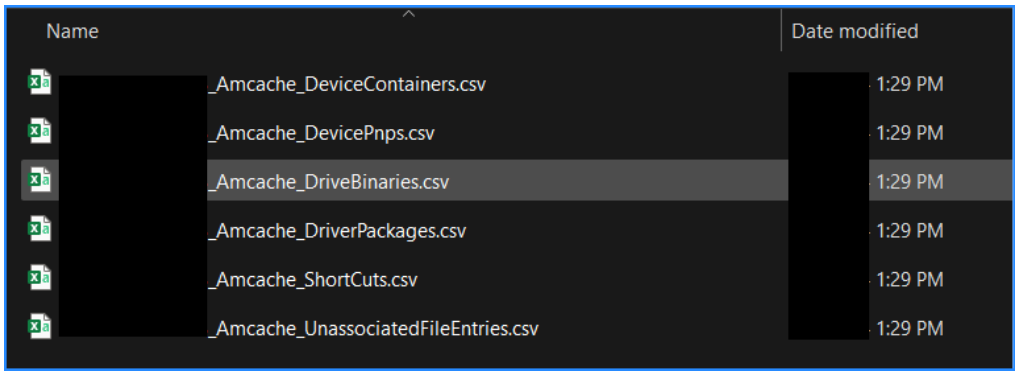

Figure 3 - .csv Files

1. Amcache_DeviceContainers.csv

Sisteme bağlı cihazlarla ilgili bilgi veren çıktı dosyasıdır.

2. Amcache_DevicePnps.csv

PnP, tak ve çalıştır anlamına gelir. Bir PnP donanımı taktığınızda, herhangi bir sürücü yüklemeye gerek kalmadan çalışmaya başlar. Bu dosya da tak çalıştır cihazları hakkında bilgileri içermektedir.
